Link Management

A-Z List Management Global Search & Replace

The following link provides a detailed description of how to create an A-Z Guide for your site, and then import a database list into that guide from an external data source. For a detailed description of this process, please click the link below and then click the "Continue" button to continue.

▼ Select Your A-Z Database Guide

If you have already created a guide to store your imported databases, please enter its ID value in the box provided below. **Please Note:** The system will automatically create the pages and boxes (one per letter - A, B, C, etc.) necessary to store the imported databases. This can drastically change the structure of your guide, so we recommend using an empty, unpublished guide the first time you import your database list.

Or, if you have not yet created a guide to store the imported A-Z database list for your system, we can create one for you. This will be just another guide in the system, which means you can edit it, add/modify content, etc. Click the button below and we will create a new guide in the system called "A-Z Database List" and set you as the owner of the guide.

▼ Import Databases from Serials Solutions®

Serials Solutions 360 and Summon subscribers can import their library's database list using a simple point-and-click import tool. During your initial import you may choose which databases you wish to import into your A-Z Guide. Subsequent imports will result in a 'sync' operation where you will be prompted to add new databases and / or update existing databases.

To start the import process, enter your Serials Solutions client identifier into the box below, and click the button to launch the import utility.
