Introduction

According to traditional Chinese medicine, the pericardial meridian is associated with the pain or fullness in the chest, palpitations, depression, restlessness, manic or depressive disorders, nausea or vomiting, hiccups, gastric pain, and distension in the upper abdomen (Bai and Baron, 2001). Since the parasympathetic modulation of both heart and gut is largely mediated by the vagus nerve, and since vagal stimulation of the gut can result in increased peristalsis while the vagal stimulation of the heart can result in decreased heart rate (Guyton and Hall, 1996), it is speculated that to some extent the pericardium meridian might be associated with the autonomic nervous modulation of the subject.

Acupuncture or acupressure at the Neiguan (P6) point, the most frequently used acupoint in the pericardium meridian, has been shown to lessen nausea and vomiting (Dundee *et al.*, 1987, 1988, 1989a and b; Ho *et al.*, 1989; De Aloysio and Penacchioni, 1992; Belluomini *et al.*, 1994; Fan *et al.*, 1997; Harmon *et al.*, 2000). Because nausea and vomiting are also related to autonomic nervous activity (Morrow *et al.*, 1992; Morrow *et al.*, 1999), we speculated that the autonomic nervous activity might be changed when acupuncture at the P6 point was performed.

Heart rate variability analysis is a useful non-invasive method for the assessment of autonomic nervous modulation of heart rate. Some diseases are associated with depressed vagal modulation, and the restoration of vagal modulation is associated with the improvement

Biophysical mechanism of T-cell receptor triggering in a reconstituted system
John R. James & Ronald D. Vale

After introducing the T-cell receptor and other essential signalling genes, a non-immune cell is capable of displaying the early events of T-cell activation when placed in contact with antigen-presenting cells, and the initial signalling in this reconstituted system is shown to require the spatial reorganization of molecules at the cell interface.

在EndNote中選擇filter的方法

其他資料庫匯入原則

① 多數西文資料庫: 勾選欲匯出的資料後，點選Export、Download、Export Citation、Download Citation即可直接匯出書目資料

② 附檔名為.enw 或.ris的檔案，若跳出檔案下載的視窗，在IE的瀏覽器開啟網頁時，請點選 **“開啟舊檔”** 即可將書目資料匯入

③ 須事先存成純文字檔的資料庫，並選定特定Filter，舉例如下：

a. Cochrane ： Cochrane Library(Wiley)

b. 中國期刊網：Endnote Import

c. 可參考此網頁

設定自動匯入PDF資料夾

先在偏好設定中設定完畢之後，以後只要該資料夾內有新的PDF檔案，在開啟EndNote時即會自動匯入新的PDF檔案。

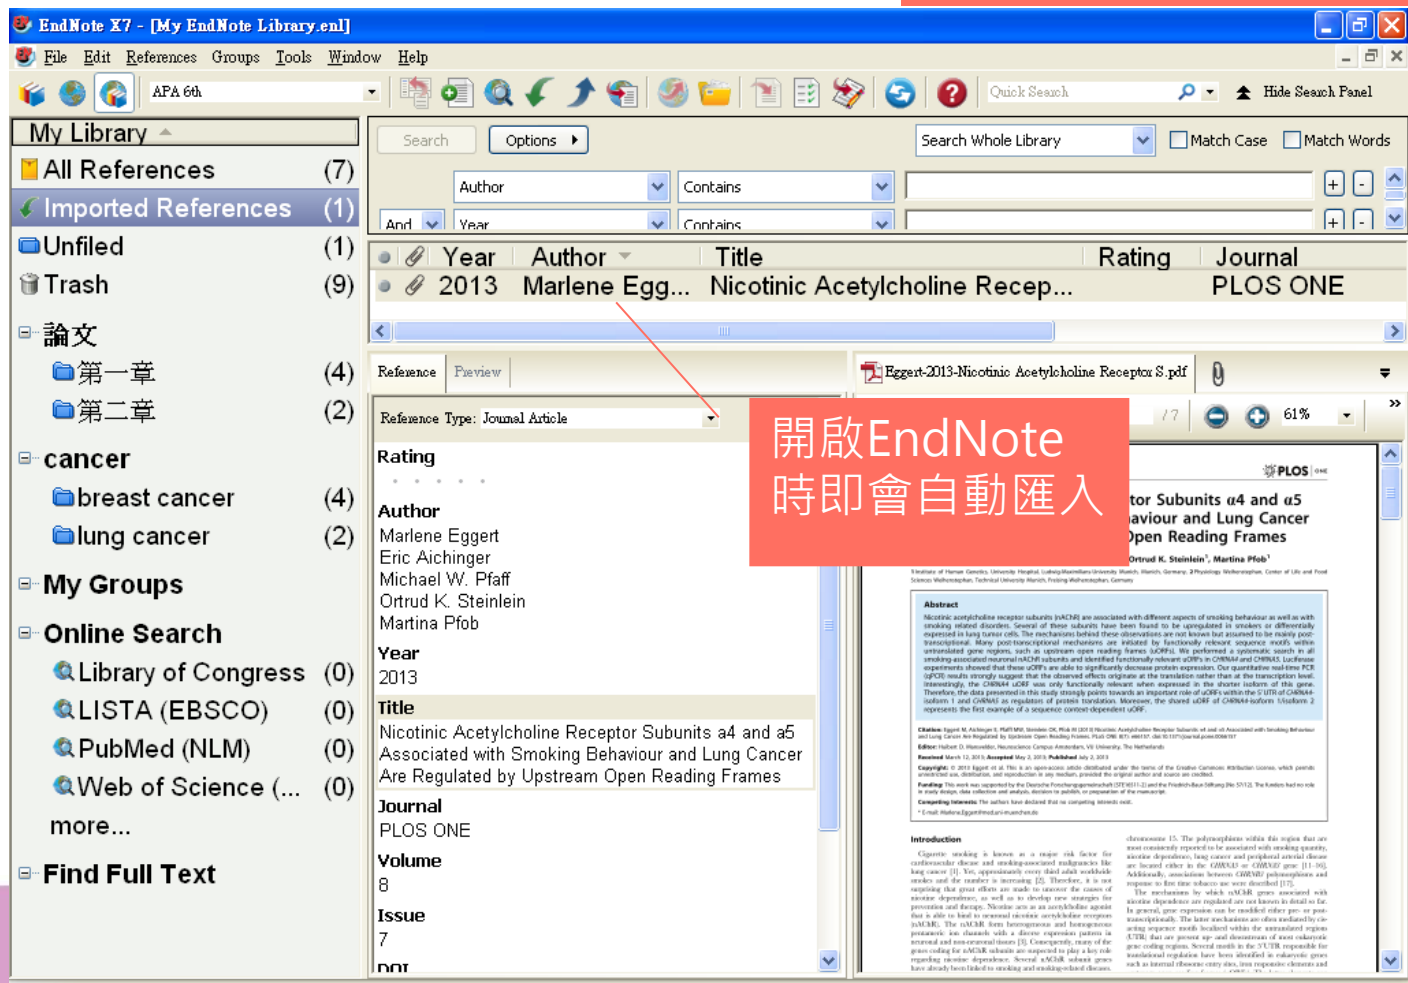

選擇欲設定之PDF資料夾後按“確定”

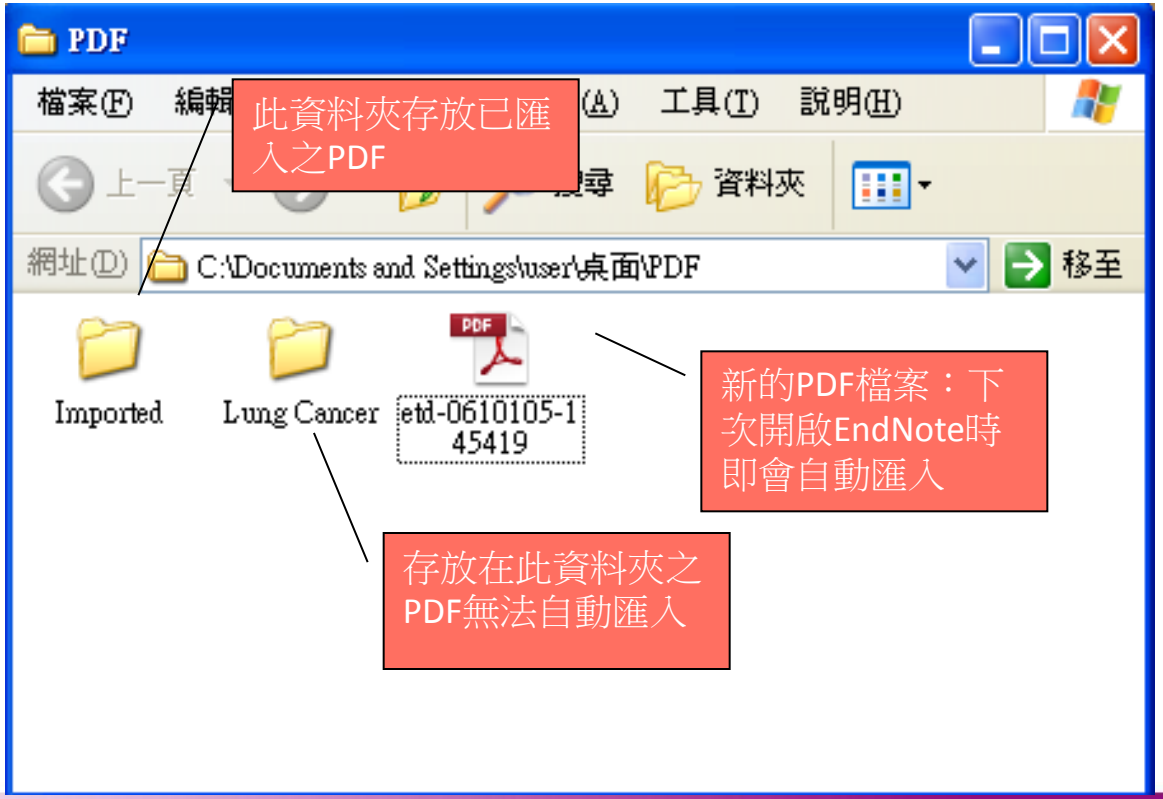

設定完成後，以後開啟EndNote時，若資料夾中有新的PDF檔案即會自動匯入

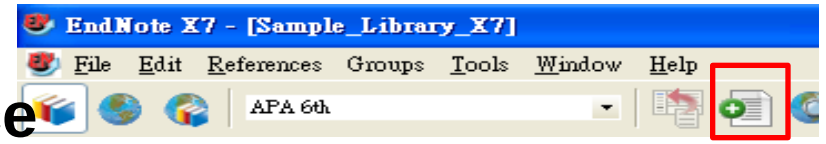

開啟EndNote時即會自動匯入

已自動匯入至EndNote中之PDF檔，會自動存放在名為“Imported”之資料夾中(系統自行產生的)。EndNote只能自動匯入存放在偏好設定中所設定的**資料夾中第一層之PDF檔案**，若PDF檔案存放在您另外建立之子資料夾下，則無法自動匯入。

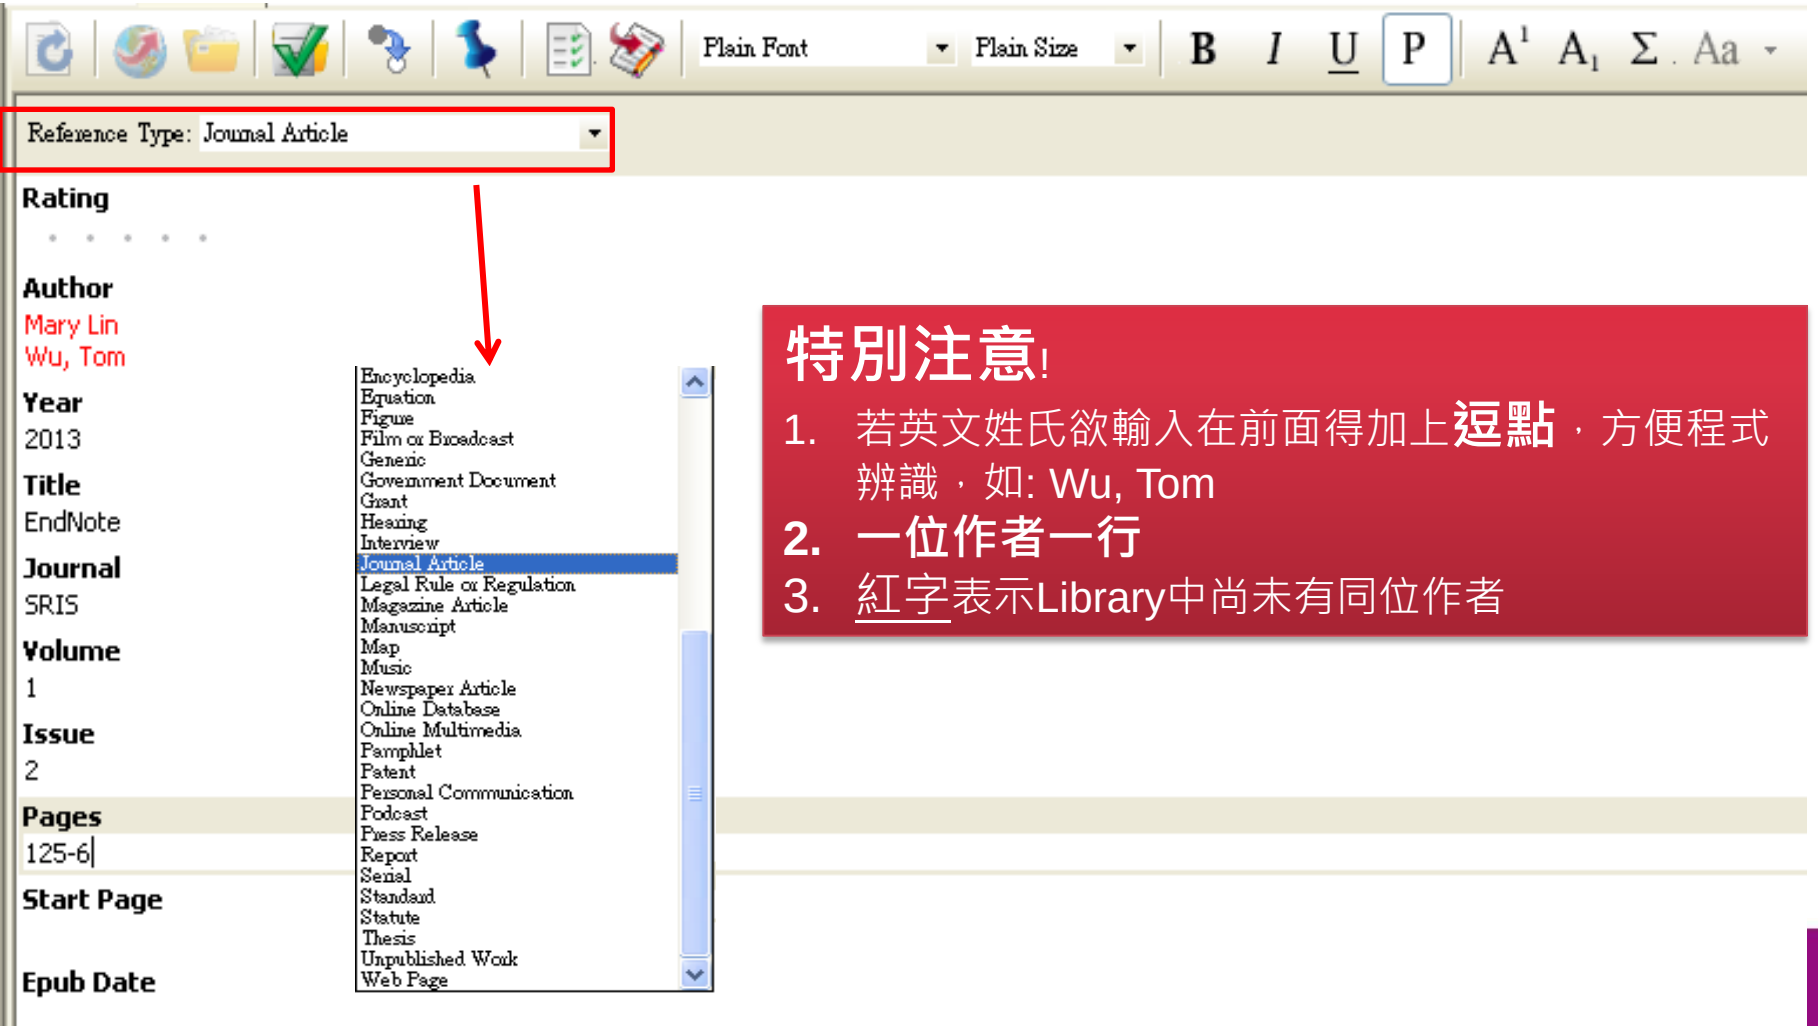

自行建立參考文獻

① 選擇工具列的**New Reference**

② 先選好參考文獻類型(**Reference Type**)後，輸入作者、年代、標題等相關書目資訊。(不知道資訊的欄位可保持空白)

特別注意!

1. 若英文姓氏欲輸入在前面得加上**逗點**，方便程式辨識，如: Wu, Tom
2. **一位作者一行**
3. 紅字表示Library中尚未有同位作者

ABSTRACT
Background
Helping young people to avoid starting smoking is a widely endorsed public health goal, and schools provide a route to communicate with nearly all young people. School-based interventions have been delivered for close to 40 years.
Objectives
The primary aim of this review was to determine whether school smoking interventions prevent youth from starting smoking. Our secondary objective was to determine which interventions were most effective. This included evaluating the effects of theoretical approaches; additional booster sessions; programme deliverers; gender effects; and multifocal interventions versus those focused solely on smoking.
Search methods
We searched the Cochrane Central Register of Controlled Trials (CENTRAL), the Cochrane Tobacco Addiction Group's Specialised Register, MEDLINE, EMBASE, PsycINFO, ERIC, CINAHL, Health Star, and Dissertation Abstracts for terms relating to school-based smoking cessation programmes. In addition, we screened the bibliographies of articles and ran individual MEDLINE searches for 133 authors who had undertaken randomised controlled trials in this area. The most recent searches were conducted in October 2012.
Selection criteria
We selected randomised controlled trials (RCTs) where students, classes, schools, or school districts were randomised to intervention arm(s) versus a control group, and followed for at least six months. Participants had to be youth (aged 5 to 18). Interventions could be any curricula used in a school setting to deter tobacco use, and outcome measures could be never smoking, frequency of smoking, number of cigarettes smoked, or smoking indices.
Data collection and analysis
Two reviewers independently assessed studies for inclusion, extracted data and assessed risk of bias. Based on the type of outcome, we placed studies into three groups for analysis: Pure Prevention cohorts (Group 1), Change in Smoking Behaviour over time (Group 2) and Point Prevalence of Smoking (Group 3).

Helping young people to avoid starting smoking is a widely endorsed public health goal, and schools
a route to communicate with nearly all young people. School-based interventions have been delivered for close to 40 years.
iew was to determine whether school smoking interventions prevent youth from starting smoking. Our

Central Register of Controlled Trials (CENTRAL), the Cochrane Tobacco Addiction Group's Specialised
Register, MEDLINE, EMBASE, PsycINFO, ERIC, CINAHL, Health Star, and Dissertation Abstracts for terms relating to school-based smoking cessation programmes. In addition, we screened the bibliographies of articles and ran individual MEDLINE searches for 133 authors who had undertaken randomised controlled trials in this area. The most recent searches were conducted in October 2012.
Selection criteria
We selected randomised controlled trials (RCTs) where students, classes, schools, or school districts were randomised to intervention arm(s) versus a control group, and followed for at least six months. Participants had to be youth (aged 5 to 18). Interventions could be any curricula used in a school setting to deter tobacco use, and outcome measures could be never smoking, frequency of smoking, number of cigarettes smoked, or smoking indices.
Data collection and analysis
Two reviewers independently assessed studies for inclusion, extracted data and assessed risk of bias. Based on the type of outcome, we placed studies into three groups for analysis: Pure Prevention cohorts (Group 1), Change in Smoking Behaviour over time (Group 2) and Point Prevalence of Smoking (Group 3).

Abstract

Background: During the influenza pandemic of 2009/10, the whole-virion, Vero-cell-derived, inactivated, pandemic influenza A (H1N1) vaccine Celvapan® (Baxter) was used in Austria. Celvapan® is adjuvant-free and was the only such vaccine at that time in Europe. The objective of this observational, non-interventional, prospective single-center study was to evaluate the immunogenicity and tolerability of two intramuscular doses of this novel vaccine in HIV-positive individuals.

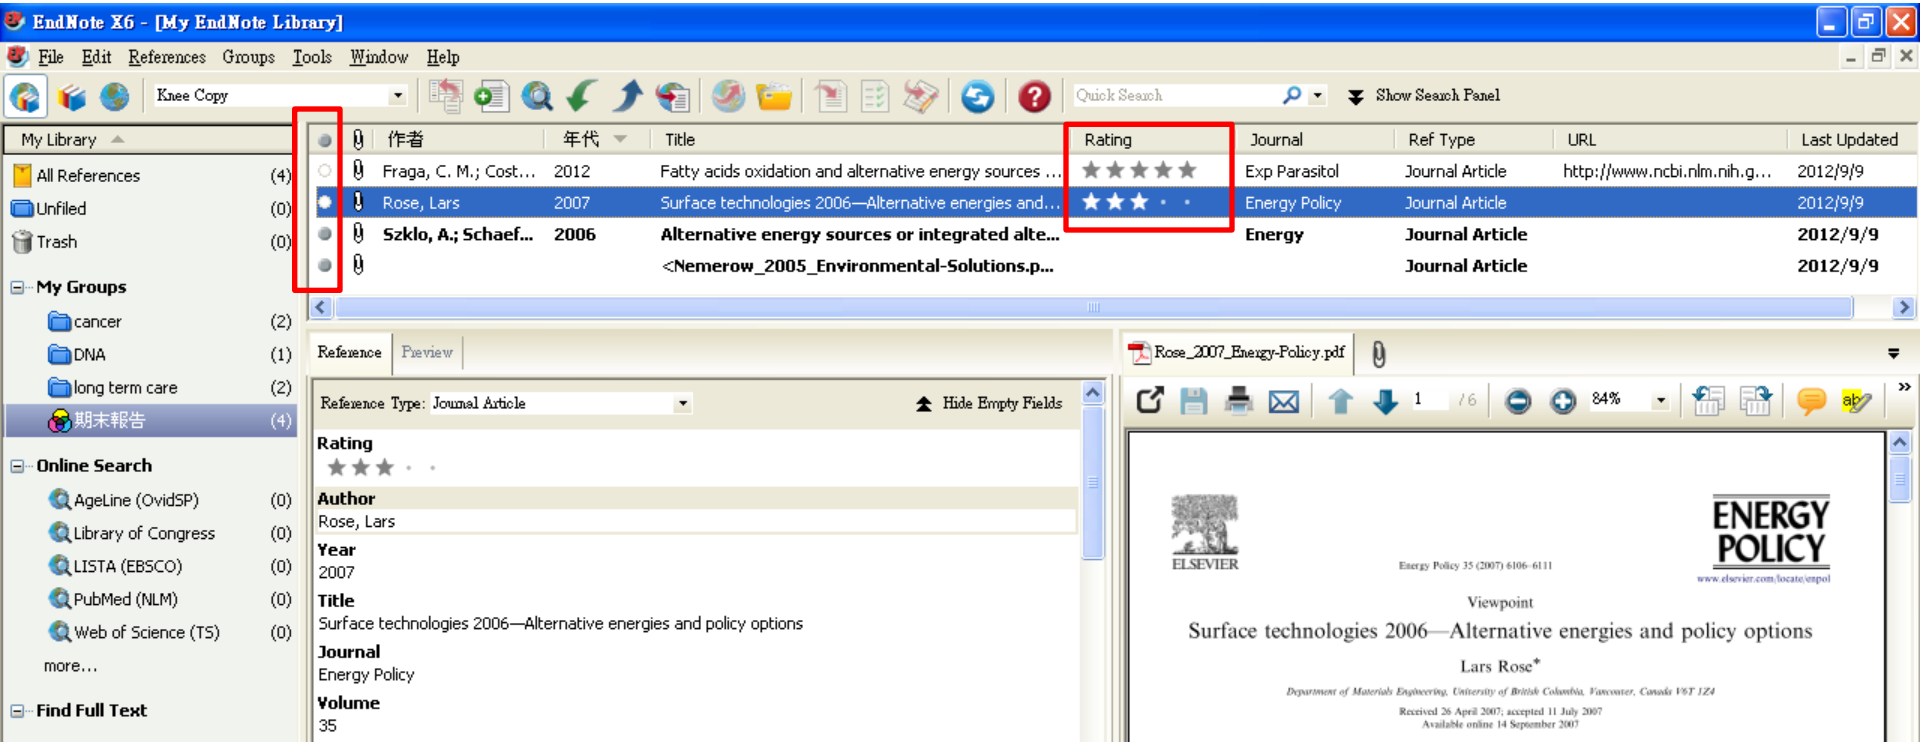

Methods and Findings: A standard hemagglutination inhibition (HAI) assay was used for evaluation of the seroconversion rate and seroprotection against the pandemic H1N1 strain. In addition, H1N1-specific IgG antibodies were measured using a recently developed ELISA and compared with the HAI results. Tolerability of vaccination was evaluated up to one month after the second dose. A total of 79 HIV-infected adults with an indication for H1N1 vaccination were evaluated. At baseline, 55 of the 79 participants had an HAI titer ≥1:40 and two patients showed a positive IgG ELISA. The seroconversion rate was 31% after the first vaccination, increasing to 41% after the second; the corresponding seroprotection rates were 92% and 83% respectively. ELISA IgG levels were positive in 25% after the first vaccination and in 37% after the second. Among the participants with baseline HAI titers <1:40, 63% seroconverted. Young age was clearly associated with lower HAI titers at

3. 若使用者將**Underline linked in-text citations**勾選起來後，編輯的文獻引文部分會出現超連結，方便使用者直接從引文指向參考文獻清單

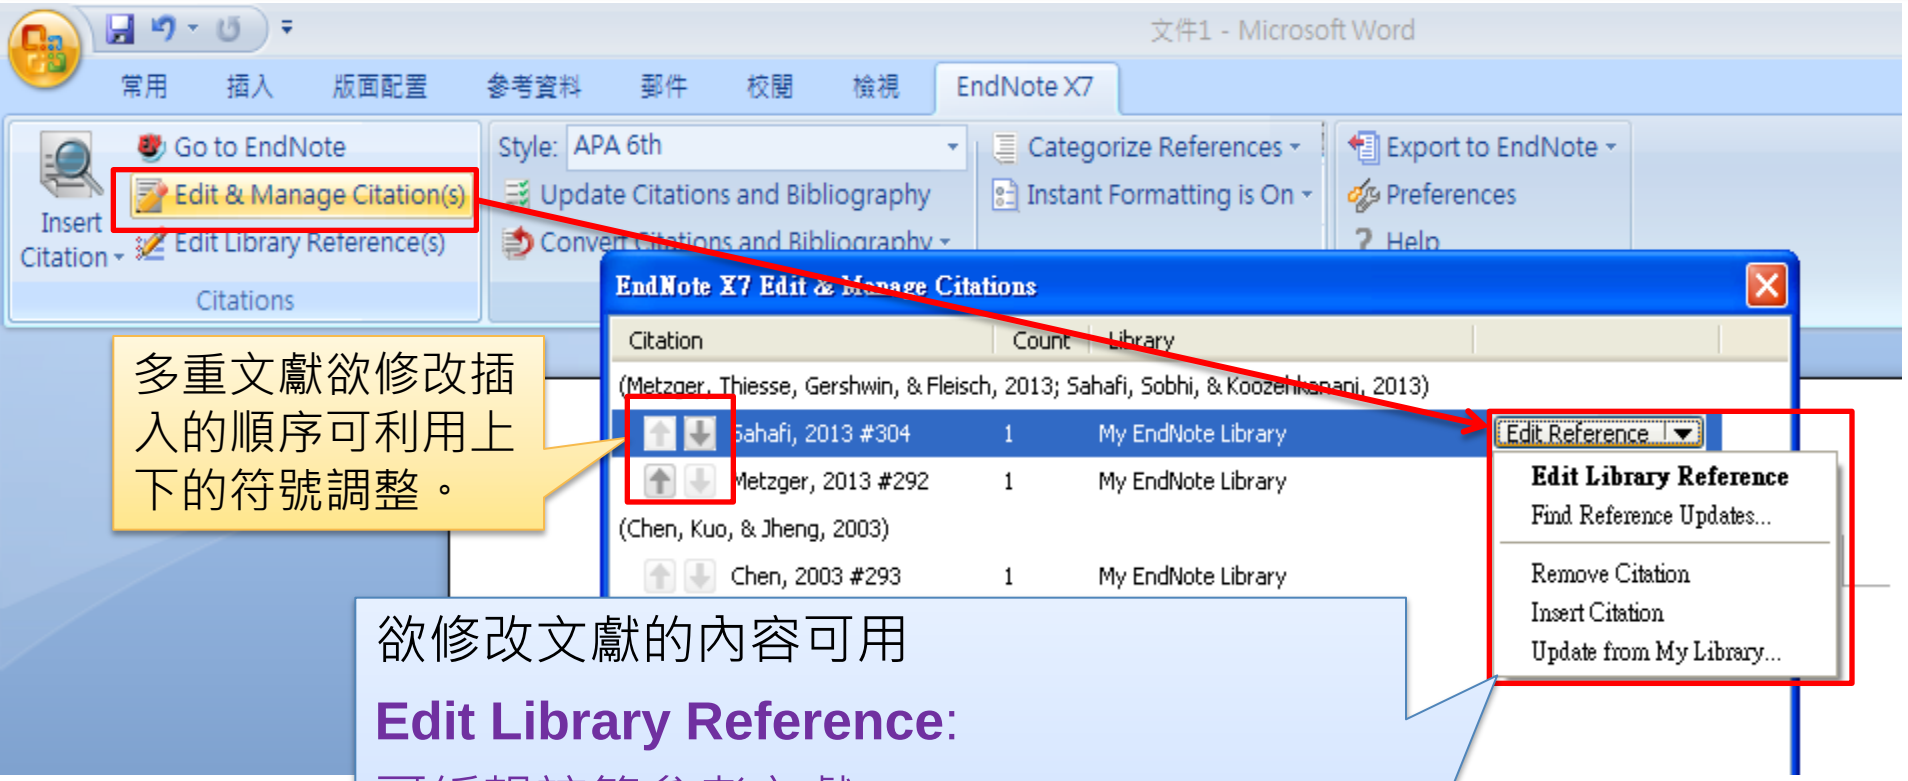

High-proton-conductive polymer electrolyte with a nanomatrix channel was prepared by graft copolymerization of styrene onto deproteinized natural rubber followed by sulfonation with chlorosulfonic acid.(Kroger, 2011) First, natural rubber latex was purified with urea in the presence of surfactant to remove almost all proteins present in the rubber. Second, graft copolymerization of styrene onto deproteinized natural rubber was carried out with tert-butyl hydroperoxide/tetraethylenepentamine as an initiator at 30 degrees C in latex stage.(Loescher, 2011)
