ProQuest Dissertations & Theses A&I

美加博碩士論文索引資料庫

收錄內容：

- 收錄**1,000多所**國際知名大專院校之博碩士論文索引及摘要，以美國和加拿大之論文為最大宗
- 收錄約**300萬筆**論文索摘，每年持續新增8萬筆索摘
- 多數1997年後發表之論文，提供前24頁預覽，方便讀者過濾所需內容
- 涵蓋主題：理、工、農、文、法、商等各類學科，特別有助於跨領域的研究
- 於 ProQuest 平台，可與期刊資料庫整合檢索，更容易掌握研究趨勢

PQDT收錄之全球著名大學論文

哈佛大學 (37,257)	麻省理工學院(27,450)	普林斯頓大學 (16,299)

摘要

翻譯

We are building its queries can be potentially very large mechanism to manage these large volumes of new result distribution framework that this result distribution framework and discuss various result distribution policies

We have implemented a REST-like HTTP This client interface provides two modes mode, query results are delivered to a client returned instead to the client as a response The client can store the handle and send another request later, including the query handle, to read the result for the query whenever it wants. The architectural support for these two modes is also described in this thesis. We believe that the result distribution framework, combined with this client interface, successfully meets the result management demands of AsterixDB.

Since AsterixDB is designed to operate on large volumes of data, the results for also designed to operate under high concurrency workloads. As a result, we need a specialized results and deliver them to the clients. In this thesis, we present an architecture and an implementation of a handling large volumes of results under high concurrency workloads. We present the various components of interact with each other to manage large volumes of query results and deliver them to clients. We also sole with our framework and compare their performance through experiments.

[隱藏反白](#)

您已從我們的資料庫要求所選內容的"進行中"機器翻譯。提供這項功能只是讓您更方便使用,絕不是要取代人工翻譯。 [顯示完整的免責聲明](#)

我們正在建築一個在 UCI 被稱為 AsterixDB 的大的資料管理制度 (BDMS)。因為 AsterixDB 被設計在大體積的資料上操作,對於它的查詢結果可能是可能非常大,而且 AsterixDB 也被設計在高的 concurrency 工作量之下操作。結果,我們需要一個被特殊化的機制處理這些大體積的查詢結果而且遞送他們給客戶。在這一論題中,我們呈現在高的 concurrency 工作量之下能夠操作結果的大體積的新結果分配架構的建築學和落實。我們呈現這一個結果分配架構和表演的各種不同成份,他們與彼此互動處理大體積的查詢結果而且遞送他們給客戶的方式。我們也討論對我們的架構感到可能,而且透過實驗比較他們的表現的各種不同的結果分配政策。

我們已經推行在結果分配架構的頂端上的一個像休息一樣的 HTTP 客戶界面讓客戶送交查詢而且獲得他們的結果。這一個客戶界面為客戶提供二個模態從讀他們的查詢結果中選擇: 同時的模態和非同步的模態。在同時的模態中,查詢結果在相同的請求-回應周期裡面被遞送給一位客戶如對它的查詢來說的一個直接的回應。在非同步的模態中,一個查詢柄被歸還改為給如對它的查詢來說的一個回應的客戶。客戶能稍後儲存柄而且送另一個請求,包括查詢柄,為查詢讀結果無論何時它想要。對這二個模態的建築支持也在這一個論題被描述。我們相信結果分配架構和這一個客戶界面結合,成功地符合 AsterixDB 的結果管理要求。

由 LEC 協力的翻譯。

摘要 翻譯

隱藏反白

We are building a **Big Data** Management System (BDMS) called **AsterixDB** at UCI. Since AsterixDB is designed to operate on large volumes of data, the results for its queries can be potentially very large, and AsterixDB is also designed to operate under high concurrency workloads. As a result, we need a specialized mechanism to manage these large volumes of query results and deliver them to the clients. In this thesis, we present an architecture and an implementation of a new result distribution framework that is capable of handling large volumes of results under high concurrency workloads. We present the various components of this result distribution framework and show how they interact with each other to manage large volumes of query results and deliver them to clients. We also discuss various result distribution policies that are possible with our framework and compare their performance through experiments.

We have implemented a REST-like HTTP client interface on top of the result distribution framework to allow clients to submit queries and obtain their results. This client interface provides two modes for clients to choose from to read their query results: synchronous mode and asynchronous mode. In synchronous mode, query results are delivered to a client as a direct response to its query within the same request-response cycle. In asynchronous mode, a query handle is returned instead to the client as a response to its query. The client can store the handle and send another request later, including the query handle, to read the result for the query whenever it wants. The architectural support for these two modes is also described in this thesis. We believe that the result distribution framework, combined with this client interface, successfully meets the result management demands of AsterixDB.

YR 2009
AB Minimal research focuses on females with Asperger Syndrome (AS). Without understanding the experiences of this population, the knowledge and understanding necessary for the development of appropriate diagnosis and supports is unavailable. The purpose of this phenomenological study was to gain insights into the challenges faced by females with AS by describing the central phenomena of their lived experiences from a critical feminist theoretical framework. Four participants were included in the study that explored their lived experiences pertaining to academic, home, personal, and social experiences including their recollections pertaining to these social contexts during elementary, middle, and high school. Data was collected through semi-structured, in-depth interviews, observations, and artifacts. Data were examined for significant statements that aligned to the research focus, and these were then coded into four significant thematic units to inform textual description and synthesis of shared experience. Four significant units emerged including victimization, anxiety, social issues, and age-appropriate interests. The essential conclusion was that female adolescents with AS share common interests, though qualitatively different, with neurotypical peers while continuing to battle internal and external circumstances. Analysis of nonconforming information pointed to the utility of other theoretical models in understanding the AS experience of young females. This research contributes to positive social change by providing a voice to females with AS, lessening their invisibility as a minority within a minority. Contributing such knowledge of the lived experiences of female adolescents with AS can lead to the development of better diagnostic criteria and appropriate supports.
