ProQuest Dissertations & Theses A&I

美加博碩士論文索引資料庫

收錄內容：

- 收錄**1,000多所**國際知名大專院校之博碩士論文索引及摘要，以美國和加拿大之論文為最大宗
- 收錄約**400萬筆**論文索摘，每年持續新增8萬筆索摘
- 多數1997年後發表之論文，提供前24頁預覽，方便讀者過濾所需內容
- 涵蓋主題：理、工、農、文、法、商等各類學科，特別有助於跨領域的研究
- 於 ProQuest 平台，可與期刊資料庫整合檢索，更容易掌握研究趨勢
- **新增Open Access 論文全文，現已經有3萬篇全文可以直接連結開啟閱讀！**

Secure mother-child attachment has been shown to have effects on child, adolescent, and adult outcomes. However, little research has been conducted in preschool children. In situations, child disabilities and maternal emotions may affect interaction patterns between the mother and the child which may in turn influence the security of the mother-child attachment in children with developmental delays. This study contributes to the literature now available. Seventy-four mothers of 1½- to 2-year-old children in an early intervention program completed a series of questionnaires. Two previously developed pencil-paper measures of attachment behaviors were selected for use in the study due to ease of administration and replication and the need for generalization of measures for use in early intervention programs. The Child Attachment Questionnaire (CAQ) and the Attachment Q-Sort Questionnaire (AQSQ) were completed along with measures of parent stress (Parent Stress Index; PSI), maternal psychological problems (Outcomes Questionnaire-45; OQ), socially desirable responses (Marlowe-Crowne Social Desirability Scale; MC), child temperament (Dimensions of Temperament-Revised; DOTS-R), child behavior problems (Child Behavior Checklist-1½-5; CBCL), and a demographic questionnaire. Compared to numbers published in the literature for typically developing children, the CAQ indicated similar percentages of children with developmental delays fell into secure and insecure categories of attachment while the AQSQ indicated a slightly lower degree of secure attachment for this sample. While parenting stress did predict lower attachment security in this study, social desirable responses were not significantly related to attachment. Maternal psychological problems weakly predicted a higher degree of security. For child factors, gender was not related to attachment and a higher degree of difficulty of temperament predicted lower attachment security. Both paper-pencil measures of attachment were statistically found to be stable over one year's time. As hypothesized, secure attachment was inversely related to behavior problems one year later. Conclusions and clinical implications of these findings are provided and may assist psychologists and early intervention programs in identifying attachment problems and treating with children with developmental delays.

安心的母親-孩子的附著已經被發現當孩子的健康情緒發展的重要因素而且已經被顯示對孩子，青少年和成人的行為產生效果。先前的研究已經主要地在典型發展中的孩子中把重心集中在附著。然而，小的研究用發展上的延遲在孩子的人口身上已經被引導。研究已經迄今建議醫學的情形，孩子障礙和母親的情緒可能影響在母親和可能以發展上的延遲依次在孩子中影響母親-孩子附著的安全的孩子之間的交互作用典型。這一項研究成為可得的文學現在的因素。七十四個母親1?-對在一個早的干涉計畫中的2歲的孩子完成了一系列的調查表。二先前發展預定的附著行為對於研究的使用被選擇的的鉛筆-紙的衡量在早的干涉計畫中為使用行政和回答和措施的一般化的需要緩和。孩子附著調查表(CAQ)和附著Q-類型的調查表(AQSQ)連同父母強調(父母壓力索引;希臘文字母的第23字)的的衡量一起被完成，母親的心理學的問題(結果調查表-45;OQ)，在社會上令人想要的反應(Marlowe-Crowne社會的願望刻度;MC)，孩子氣質(氣質的尺寸-校訂;點-R)，孩子行為問題(孩子行為檢查表-1?-5;CBCL)，和一個人口統計學的調查表。與數字相較對於典型發展中的孩子在文學中出版，CAQ指出了當AQSQ為這一個樣本指出了一個安心附著的更些微比較低程度的時候，和發展上的延遲孩子的相似百分比區分為附著的安心和不安全種類。養育壓力確實預測這一項研究的更低的附著安全，不過社會的令人想要的反應重要地不與附著有關。母親的心理學的問題微弱地預測了一個安全的更高的程度。因為孩子因素，性別與附著和氣質的一個困難的比較高的程度無關預測了比較低的附著安全。兩者的附著紙-鉛筆的衡量以統計上來看被發現是穩定的超過一年時間。依照假定，安心的附著反的一年之後與行為問題有關。這些調查結果的結論和臨床含意被提供而且可能協心理學者和早的干涉計畫釐清附著問題而且和孩子用發展上的延遲對待。

RT Thesis
A1 Beteta, Lisa Marie
T1 A phenomenological study of the lived experiences of adolescent females with Asperger Syndrome
JF 數位化論文典藏聯盟(Digital Dissertation Consortium)
YR 2009
AB Minimal research focuses on females with Asperger Syndrome (AS). Without understanding the experiences of this population, the knowledge and understanding necessary for the development of appropriate diagnosis and supports is unavailable. The purpose of this phenomenological study was to gain insights into the challenges faced by females with AS by describing the central phenomena of their lived experiences from a critical feminist theoretical framework. Four participants were included in the study that explored their lived experiences pertaining to academic, home, personal, and social experiences including their recollections pertaining to these social contexts during elementary, middle, and high school. Data was collected through semi-structured, in-depth interviews, observations, and artifacts. Data were examined for significant statements that aligned to the research focus, and these were then coded into four significant thematic units to inform textual description and synthesis of shared experience. Four significant units emerged including victimization, anxiety, social issues, and age-appropriate interests. The essential conclusion was that female adolescents with AS share common interests, though qualitatively different, with neurotypical peers while continuing to battle internal and external circumstances. Analysis of nonconforming information pointed to the utility of other theoretical models in understanding the AS experience of young females. This research contributes to positive social change by providing a voice to females with AS, lessening their invisibility as a minority within a minority. Contributing such knowledge of the lived experiences of female adolescents with AS can lead to the development of better diagnostic criteria and appropriate supports.
